License and Terms of Use

Grant of Use Patent Right

Herhofer Space Group

Herhofer Space Research Institute™ on behalf of Galactic Services Space, Herhofer Space Group corporate patents registry operator

License of Use and Limitations

Patent is provided in the way Herhofer Space Group invented it for the purpose of “Cash Out Patents” in addition to grants, loans, crowdfunding, etc.

We provide limited public use in use case follow our practices without modification, partial use or context change, derivatives, any amendments prohibited.

Global patent envisioning is to launch impossible projects beyond all humanity capability to collect money and fund the project, for example centillions in our life use case launch Herhofer Space Group Space Business £350 centillion cost estimate requirement.

Patent is provided default, meaning estimate later in this document is cashed out as the patent allow dual use purpose sourcing H1 quintillion in cash is warfare of free grant money which is already extracted and prohibited to use of money source, meaning contains £0 to cash out from “Cash Out Patents” Herhofer Space Group Corporate Patent.

The patent is not related to any other our invention, allegations, accusing of restrictions are on the grounds of corporate level not providing our trade secrets and investments linked to our global Universe Business.

Envisioning, deep space exploration fast approaching our modern society without foundation and rock-solid experience in launching extreme patents in space, we provide access to this patent branded to defend and provide accessibility to our view – How to invent, invest and launch extreme cost business beyond £350 centillion with nothing in cash and grants except own money.

Vision of future use, providing extensive research and evidence we can do better than anyone and any business in this world and beyond is our Herhofer Stargate Celleste Space Jurisdiction Economic Environment found and financed only by one single family – Lorenz & Astrid Herhofer.

Provided, we are obstructing other people business classifying our patents and prohibit access is the satisfaction of number of conditions ground of duality of use all our space patents and how are patents are going to be used.

In general, we open only crucial for the world economy patents, like the present allowing funding of extreme patents beyond world financial capability. This patent worth cost estimate is H 1 quintillion, meaning the sourced nil taxation grant is enough to launch military offence globally.

Patent remains Herhofer Space Group exclusive corporate patent and trademark Herhofer Space Research Institute ownership with restrictions applied on defined scope use only, anything outside the boundaries defined below is accounted patent rights breach. It is your responsibility to understand patent rights indirect access to Herhofer Stargate Celleste Jurisdiction your country may not have at all.

Preface

We agree, world needs better education and business to perform deep space exploration missions not only via a global feature TELESCOPE like HOBLE and JAMES WEB.

We divide space in scopes and all documentation is with the concerns of only Herhofer Space Group corporate view, we are the best on the market proven in science and mathematics, and innovations:

- Planetary – surface, deep research, air, water, land
- Orbital – Orbital station, hotel, construction yard
- Space – unallocated by universe gravitation field areas
- Interstellar – include the above plus construction, development, and settlement
- Universe – all the above including deep space exploration missions, live lifespan onboard spacecraft, maintain life for centuries single spacecraft in mission
- Gravity interpolated fields detached of any planetary objects
- Space vehicles providing help to outer worlds and deep space explorers in void
- Outer worlds – any instance of gravity perceivable even on the Earth planet surface as 1G defining perceptible accelerator even in orbital scope of development where plain gravity is the ground of related objects same as the building have foundation. Any related to gravity and beyond is outer world defined in our corporate publications

The purpose of this patent is to define boundaries and sharply allocate impossible finances to allocate globally and worldwide.

The provisioned details cover how the patent works and what is the right way to implement this patent accounted as open source, everything outside this document is restricted as prohibited and patent breach.

Problem

In the spotlight of modern space industry accelerated business model, we need to launch extreme projects cost beyond world total capital, for example £350 imperial (606 digits) centillion.

CASH OUT PATENT

Abstract

When COVID-19 began and lockdown took place, I started looking to launch new business in different scope. My view over software engineering is a topic going to exhaust as a major market player. Elon Musk, Jeff Bezos, Sir Branson, Paul Allen launched space construction in larger scope of private field extending existing government only priority rocket launch and construction.

Major point was to cover my interests in better placement on the market as demand for top consultants declined.

Imagining new business field, I researched new phenomenon erected heights in the US in the global field of space competition.

Vitality bound, away of space but was absurd all newcomers in space are software engineering consultants like me.

In my consulting practice, I am using my own patent "Superspeed Release To Market, Piloting Project and Navigating Technologies" latest update patent launched in 2014.

During the years, my focus was strongly on financial software engineering inventing Deterministic Search Of Infinity and Zero Point delivering 225% net revenue per month in FX Trading, what makes me always set bar highest possible rank, working in top 10 world global banks, top 10 blue chip world global companies is extravaganza way to deliver new business solution.

I am using Microsoft technologies since the dawn of MS-DOS tracing the birth and growth of the most successful software engineering company.

For that purpose, I read Bill Gates CV in detail and went in Harvard to be better educated and understand what he found there making him leave behind education like Harvard University.

What I found is much deviated of my expectations, making me understand one more business model – nil spot business.

I couldn't ever imagine nil is a place someone could do business and always skip, skip, skip...

Now, After Bill Gates and Microsoft starting in the sky, I am phuuuh in Harvard and again nil spot for business. What should I do? It is ground-breaking discovery for me after many skips.

I found the real nil spot business; a software engineer can assign anything to null pointer with proper casting.

I did the same, after SWOT analysis I found during next 100-1000 years I am with no competitors in space industry and assigned to nil, Herhofer Space Group. The rest is well known in case you read this paper.

Introduction

Launching extreme projects with capital requirements beyond total world capital is a patent we invented and published after we successfully financed our £350 centillion Space Business.

This patent resolves global economic invention issue in financing global projects mostly outside of country specific and government specific need but still ahead of forefront official science, like Jeff Bezos, Elon Musk and Sir Branston explore Space Business in The USA. The economic of any country provide very limited financial support to inventions, the investments are strongly defined in area of Most Required subjects, not the advanced research and advanced applied science.

Enforced constrains of COVID-19, give bad results finding grants to universities are decreased by 50% and more annually.

At some point of time, we understood we are abandoned science and university even none of our scoped patents and education is on the market. Smoothness of the launch event come from constant learning, research and implement continuously and evolutionary following our Herhofer Quality House, Geneva defining how to manufacture jewels with precision of space and quality of nature existing billions of years unchanged.

What we invented in this patent, extends below already existing scopes of funding:

- Grants
- Government grants
- R&D Business Taxation
- Loan
- Patent Mortgage
- Crowdfunding
- Own finances
- Investor Angel
- Investors
- Investment against shares
- Business grants

Methods

Launching impossible projects beyond total world financial capitals £350 centillion project cost make Herhofer Space Group invent new approach and extend the scope of present inventions financing.

After careful evolutionary approach continuing more than 18 months, we invented new fundamentally same result approach delivering financial value for any project and invention.

We chose to find Herhofer Space Group approach to finance and launch Herhofer Stargate Celleste Space Jurisdiction at project cost £350 centillion cost estimate in 2019 extended and finalised ecosystem milestone 2022 is much more, we stopped accounting just when scope increases we add new value patent to reset our funding value of money and cover gap resulting in new scope deficit extension in for of capital cost raise in required total funding. Evaluating criterions during the time, we filtered and envisioned new scope defining the targets by piloting patent and navigating analytics.

The result of Herhofer Space Group works defined present patent we release on the market for open-source use inside conditions of our own license, actualising the difference in implementation practices of Herhofer Space Quality House, Geneva, and the rest of the world.

British financial system and unwritten constitution made any methodologies common practices distinct the rest of the world defining two scopes common and uncommon. We use common practices only in the full-blown patent, already existing on the market for decades, success and reputation. Broad support we found in universities like Harvard University, MIT, Oxford university, Manchester University.

We collected data, analytics and events by planned work, customisation, use cases, SMI expertise over subject, demo, SWOT, new university education degree in Harvard, webinars in MIT, research of Oxford University and Manchester University capabilities and implementation, registrations, government practices and publications research in HMRC, Companies House, Law, HMPO, certificates, test and POC scheduled technology applied and devised to provide confirmation or rejection of our disputes against decreased grants and existing patent financing practices, performing exhaustive crypto currency testing, trading platforms evolution, crypto market investigation after Bitcoin was blocked in The UK and John McAfee died.

Herhofer Space Group used most popular research methods

- Quantitative research – analysing numerical figures results from data and experiments into consolidated reports and charts
- Qualitive research – which results made us found Herhofer Space Quality House, Geneva, Switzerland
- Descriptive Research – new educational degree in Harvard university; webinar MIT; Oxford books and inventions and patents management; Manchester University global world branches representation, space research capabilities and educational programs.
- Conclusive research – drawing from the above, Herhofer Space Group consolidated the results and strengthen the goals, targets, schedules to reduce risk and scope of works.
- Explorer research – create google adverts, publish corporate blogs, corporate writings, corporate tweets gather numerical analytics results for further analysis

-
- Case Studies – How Oxford University and Staffordshire Universities registered in OfS, how come Oxford University is the Best in world number 1, why is acceptance highest lower offer
 - Fundamental research – Register Herhofer Space University in OfS, prepare documents, apply financing and grants, apply use of sensitive words “University” and “Institute”
 - Analytics research – consolidate gathered numbers in platforms of Cloud Computing, Advertising, Market Hits, Platforms, and registers.
 - Superspeed RTM SDLC, Navigating and Piloting Projects

We used two main methods, study in Harvard where Bill Gates and Paul Allen graduated and founders of most successful software engineering company ever – Microsoft,

SWOT analysis after

- Oxford University – oldest and most prestigious university
- Harvard University – educated Bill Gates and Paul Allen
- Rockefeller University – 49 Nobel Prizes

Our only obstacle was COVID-19 issues and economic collapse, the rest is Herhofer Space Group patents, innovations, and inventions

Results

Launching extreme Herhofer Space Group space projects with cost beyond total world global capitals of £350 centillion make highest standards and practices research and invent our own, not finding our needs on the market

The patent is aimed to consolidate the classified information and data of Herhofer Space Group in single issue innovation to deliver Herhofer Space Group Space Business Project fly beyond solar system, for the purpose of Herhofer Space Group space business and project "Fly Beyond Solar system" we invented Herhofer Space Research Institute and Herhofer Space University and Herhofer Stargate Celleste Space Jurisdiction Business District with Celleste passport RFC HMPO British Passport and Herhofer Stargate Interstellar Identity using exposed private key encryption technology of Herhofer Space Research Institute, because UK doesn't having even single orbital engineer on the HR market.

Launch Extreme Patents is influence of space business we fund new space agency trend, distinct knowability space agency, after we solved Fitch's Paradox Of Knowability and Invented Herhofer Net Worth blockchain banknote, defining natural bank account under EPR Paradox solution.

The patent consequent cycles to implement financing is to devise new concept of business launching impossible and imaginable project no one can deflect from business use. Herhofer Space Group approach defends our business viewpoint covering authenticity of knowability space agency.

The patent is provided as is, defining new way and new trend of financing extreme projects of patent worth estimate

- Cycle A create all required patents for the area of applied business, we have 100+ patents
- Cycle B patent net worth estimate, we use our Herhofer Space Quality House, Geneva
- Cycle C fund, envision, develop and invent own financial system eg, Bristol Pound in the level of sophistication you would equal to launched extreme space business project, we invented Herhofer Net Worth
- Cycle D invent bank and financial institution, we use Herhofer Space Bank
- Cycle E cash out into own private account, the amount is net, nil taxation, representation of grant patent net worth estimates using patent valuation practices, we use HSBC
- eventual business infrastructure to invest in patent implementation in case you will convert patent to business, we use Herhofer Space Group, Herhofer Space Bank, Herhofer Net Worth Base Currency Reference and Blockchain Banknote, Herhofer Space Research Institute, Herhofer Space University, Herhofer Stargate Celleste and Herhofer Stargate Celestial Interstellar Identity Passport.

The exclusiveness of Launching Extreme Projects £350 centillion is space business practice where numbers are ever greater than any imaginable and revenue per month from single patent could be billion digits in length number

Decision

Patent Launch Extreme Project of cost £350 centillion delivered in practice, we provision our expertise under patent name "Launch Extreme Herhofer Space Group Space Business Project of cost £350 centillion" is delivered.

To analyse and deliver the patent we used another our patent "Superspeed RTM SDLC", a shortcut to market. A supremacy in speed project management to pilot project and navigate technologies

To all readers, I would suggest carefully pend your emotion and attention on time, don't bother about the patent until you control your time lifecycle lease.

Finding "Launch Extreme Herhofer Space Group Space Business Project of cost £350 centillion" we delivered private world first space economic jurisdiction Herhofer Stargate Celleste.

Thinking about our future business, we agree British Business environment is the world best equipped for any kind of inventions and innovations first of all first is **unwritten constitution** allowing to do anything possible

Discussion

“Launch Extreme Herhofer Space Group Space Business Project of cost £350 centillion” patent is of high importance to our Herhofer Stargate Celleste Space Jurisdiction Business Economic Area we invented and delivered full cycle economic environment, planetary, orbital, space and interstellar capital market and currency Herhofer Net Worth founding Herhofer Space Group Space Business.

The patent is engineered approach to finance extreme projects, meaning Herhofer Space Group Space Business Project, at extremes of project cost in 606 digits number not existing in foreseeable future on world capital market. The actual finding of Herhofer Space Research Institute is approach to deliver our own projects cost effectively, provide free of charge space education and deliver new type of economic environment – space.

Importance of innovations to drive new approaches and build new roads of industrial renovations is crucial when we talk about space business. Elon Musk, for example made very cheap rockets winning grants from NASA and US government allowing him to extend space business. On the other hand this most advanced space construction business is heavily struggle finances must receive government grants. The outcome of grants is defining the business default instead of futuristic.

Herhofer Space Group believe, financing extreme projects is cheaper than relying on grants constantly close to default and shuttering even most advanced space present business.

Influencing ground breaking changes in investment and market delivery provide ramps to scale existing businesses making jumpstart from planetary to orbital and interstellar adventures.

Fundamentally different approach is more likely belong to new economic instead of business, defining another new success of British Business environment providing conceptual “back in the future” business advanced platform instead details and banking to arrange overdraft pay bills.

Can you respond in a second, how much would you invest you own fortune if immediate grants and funding is inaccessible?

The very concept how business works in the UK and US abolish all business presumptions in the next example.

- What you gonna do with 360 hectares empty plot in the desert? – I will buy machinery, dig the land, plant threes and forest, build lake making holiday village
- The UK business is completely different in scale. – I have no time, the cost is very high.

These two concepts of business define constitutionless and constitutional business in the USA, where in the USA we must have plot, we must have money, we must..., the time constrain breaking deeds to extreme expensive projects.

From that point of view, would you try launch £350 centillion project?

- Why yes?
- Why no?

Forcing major conditions to practices if flexibility is defined only in one mind, then the delivery always struggle to delivery chain missing shortcuts to market.

Purposefully, do you use planning or buy innovative patents?

If yes or no?

You host your project or accommodate your purposes to build business in extreme of cost and requirements panned in illusionary imagine of dreaming hungry for adventures in another world only value in one mind?

Conclusion

“Launch Extreme Herhofer Space Group Space Business Project of cost £350 centillion” patent is approach distinct of our Herhofer Space Group ordinary view - Clearly state the answer to your main research question.

Honestly, I haven't got any questions to resolve.

I had estimated price of my project I want to launch in space beyond solar system. I cannot imagine any questions having price £350 centillion and “I want this project running”.

Wake uuuup, I am talking to myself. Does anybody read, yet? Can you pay £350 centillion for your next level business to settle better market position in dispute with COVID-19 lockdown?

Research foundation is satisfied deliver to market extreme project of cost £350 centillion. With nil questions, I presume it is easy to deliver, skip the time and schedules.

Leaving vital and core ideas of the research plan how to deliver the project changes is a question to planning. We don't need any question.

The near future is defined by more and more space projects in China, Japan, USA, EU, the most powerful space countries adding value to gross world economy, unfortunately the value is restricted by very limited view to public and lack of educational purpose.

It is misty road deliver extreme projects.
